

Cyber Threats have become a major problem beyond geographical borders. With the increase of advance and complex threats the global landscape has changed putting critical infrastructure, Governments, Corporations, Financial Institutions, Telco's, Industries and defense networks worldwide at great risk.

US-Council is a network security organization based out of North America. The mission of this organization is to fight cybercrimes. US-Council helps industries in understanding the rapidly growing security threats against the networks and to combat hackers. US-Council also offers consultancy services in protecting critical Infrastructure around the world through its partner network.

Cybercrime is rampant. The only way to protect the confidentiality, integrity and privacy of your organization is thorough education and awareness. US-Council offers certification courses which will equip you with the skills to protect your organization's data and network from malicious intruders.

The tools and techniques that you will learn in our courses are not confined to any particular vendor or platform. Our aim is to train the cyber security expert of tomorrow who is equally at ease in protecting the conventional or the latest cutting edge network.

### **Why US-Council?**

Malicious hacking, Trojans, backdoor and worm attacks on organizations lead to a loss of billions of dollars every year. Our certificate program gives you the ability to secure yourself from such attacks. To outwit hackers, become one! Be secure!

Our program is designed to be vendor independent so that you are not tied down to a single platform. And it is continuously being evaluated and updated by our team of security experts. The result - training programs which are unmatched in content and effectiveness.

### **Mission**

Our mission is simple - to make the cyber world a safer place. But the task is enormous. To achieve this, we need to spread awareness of how vulnerable it can be on the World Wide Web without proper protection. Secure or perish!

Our courses are designed with one thing in mind - to secure the network, data and privacy of individuals and organizations irrespective of the equipment and software they use and deploy.
